

LUNA MULTI

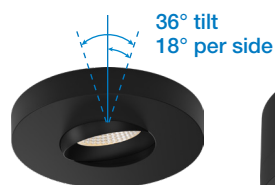

Bring adjustable, directional light to a standard octagon junction box. LUNA MULTI installs directly inside a 4" junction box, with no separate recessed housing required. A 36° tilt gimbal and 40° beam let you aim light exactly where it's needed, and it's fire-rated when installed in a steel octagon box. An optional surface-mount collar cleanly covers the junction box for concrete and hard-ceiling installations.

¹ Refer to the spec sheet for more details. ² Wet location surface mount junction boxes are not supported.
